DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-28, drawn to an electrostatic actuator.

Group II, claim(s) 29-41, drawn to a method for manufacturing an electrostatic actuator.

Group III, claim(s) 42-47, drawn to droplet discharge devices.

Group IV, claim(s) 48, drawn to a micro pump.

Group V, claim(s) 49, drawn to an optical device.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reasons: the common technical feature in each of the groups is an air gap formed between the plurality of partition parts by etching a part of a sacrifice layer formed between the electrode and the vibration plate. However, this element cannot be a special technical feature under PCT Rule 13.2 because the element is shown in the prior art. Koeda (US 6709089 B2) discloses an air gap that is formed between a plurality of partition parts by etching a part of a sacrificial layer that is formed between the electrode and vibration plate (see Figs. 3A-3J).

Currently, no claims are generic.
